Summary

Junior Software Developer with applied experience building API-driven ETL workflows, OAuth-based third-party integrations, and full-stack web and mobile applications. Skilled in Python, TypeScript, React, Next.js, PostgreSQL, and REST APIs, with practical experience in Stripe payment integration, AI-assisted development, Figma-to-code implementation, AI output validation, and dashboard development.

Experience

Mvolo January 2026 – July 2026
Data Analyst Intern / Dashboard Developer Remote

- Analyzed financial data and managed data-entry workflows, identifying a recurring manual-work bottleneck.
- Initiated a public API-based ETL pipeline to automate data retrieval and improve reporting reliability, reducing manual data entry by 70%.
- Contributed to the Mvolo Central Command Centre dashboard by integrating ETL outputs and implementing critical dashboard features.
- Led development of LayerInsights, integrating Shopify and Klaviyo OAuth as third-party data connectors and implementing a live Stripe payment workflow for the platform's billing system.
- Coordinated a second early-stage project, FlowOS, by clarifying tasks, maintaining project context, and contributing code when needed.

Nueca Technologies Inc. May 2025 – July 2025
Android Developer Intern Onsite

- Developed an Android application using Kotlin and Android Studio under senior developer mentorship.
- Built mobile app features involving UI/UX implementation, backend integration, and local persistence using Room Database.
- Applied Git workflows, code reviews, and agile development practices in a collaborative software development environment.

Projects

NoBogey | Mobile Development, Figma, Codex

- Developing a mobile application for golfers in the Philippines using Codex-assisted workflows to translate Figma screens into working interface components.
- Validated AI-generated output against the source designs and manually corrected layout, spacing, styling, responsiveness, and functionality before integration.

Password Pattern Randomizer | Python, CLI, Security

- Built a CLI tool that securely randomizes password symbols using cryptographically random substitution, preserving letter and number positions and never persisting the password beyond the running process.
- Added a `--jumble` mode for full character reshuffling and unit test coverage to validate output correctness.

6MAL | Kotlin, Room Database, UI/UX

- Developed a full-stack Android application using XML/Kotlin, REST API integration, Room Database, and complete UI/UX design from wireframes to prototype.
- Implemented core features including authentication, main interface, account management, and search functionality with real-time results.

Skills

Backend & APIs: Python, Node.js, REST APIs, OAuth, Shopify API, Stripe, PostgreSQL, Supabase, Docker

Databases & Data: SQL, PostgreSQL, DuckDB, ETL Development, pandas, Data Cleaning, Data Validation

Frontend: React, Next.js, TypeScript, JavaScript, HTML, CSS, Dashboard Development

Mobile: Kotlin, Room Database, Android Studio, Expo, React Native

Development Tools: Git, GitHub, Vercel, AI-Assisted Development, Claude Code, Codex, Cursor, Power BI, Google Sheets, Excel

UI/UX: Figma, Prototyping, Typography, Design-to-Code Implementation, AI Output Validation

Soft Skills: Problem-solving, Collaboration, Attention to Detail, Adaptability, Communication

Education

Ateneo de Naga University 2026
Bachelor of Science in Computer Science Naga City, Camarines Sur

- Thesis: Explainable software-defined intrusion prevention for SOHO networks using PPO, policy distillation, and TreeSHAP-IQ.
