Summary

Full-Stack Developer experienced in building API-driven workflows, third-party integrations, dashboards, and web/mobile applications using React, Next.js, TypeScript, Python, PostgreSQL, and REST APIs. Contributes across product research, UI/UX, development, integration, QA, and AI-assisted development.

Experience

Mvolo — January 2026 – July 2026
Data Analyst Intern / Dashboard Developer — Remote

- Identified a financial reporting bottleneck and initiated an API-based ETL pipeline that reduced manual data entry by approximately 70%.
- Integrated ETL outputs into the Mvolo Central Command Centre dashboard and developed reporting functionality.
- Led LayerInsights development work involving Shopify API access, Klaviyo OAuth integrations, Stripe billing, and supported early-stage development of FlowOS.

Nueca Technologies Inc. — May 2025 – July 2025
Android Developer Intern — Onsite

- Developed Android application features using Kotlin and Android Studio under senior developer mentorship.
- Implemented UI components, backend integrations, and local data persistence using Room Database.
- Worked with Git, code reviews, debugging, and Agile development practices in a collaborative engineering environment.

Projects

NoBogey | React Native, Expo, Next.js, Supabase, Figma, Codex

- Contribute across the product lifecycle of a golf-focused startup, including product research, UI/UX design, development, testing, and iterative refinement.
- Built functionality across three platforms: a golfer/caddie mobile application, an admin/CRM dashboard for caddie verification, tee-time configuration and strike management, and a startup marketing website.
- Translate Figma designs and product requirements into working features using AI-assisted workflows while manually reviewing code, debugging issues, and performing QA.

6MAL | Kotlin, REST APIs, Room Database, UI/UX

- Designed and developed a full-stack Android application using Kotlin, XML, REST APIs, and Room Database from wireframes through implementation.
- Implemented authentication, account management, backend integration, local persistence, and real-time search functionality.

Password Pattern Randomizer | Python, CLI, Security

- Built a Python CLI tool using cryptographically secure randomization, optional full-character jumbling, and unit tests while avoiding password persistence.

Skills

Frontend: React, Next.js, TypeScript, JavaScript, HTML, CSS, Vite, Tailwind CSS

Backend & APIs: Python, Node.js, REST APIs, OAuth, Shopify API, bol.com, Stripe, Supabase, Docker, Postman

Databases & Data: PostgreSQL, SQL, DuckDB, pandas, ETL Development, Data Cleaning, Data Validation

Mobile: React Native, Expo, Kotlin, Room Database, Android Studio

Development: Git, GitHub, Vercel, Cloudflare, Claude Code, Codex, Cursor, AI-Assisted Development

Analytics & Design: Excel, Google Sheets, Figma, Prototyping, Design-to-Code, UI Refinement, AI Output Validation

Education

Ateneo de Naga University — 2026
Bachelor of Science in Computer Science — Naga City, Camarines Sur

- Thesis: Explainable software-defined intrusion prevention for SOHO networks using PPO, policy distillation, and TreeSHAP-IQ.
